

KARTIK SHARMA

Contactkartikforwork@gmail.com

SKILLS

- **Programming Languages:** Python, Html, Css, JavaScript, Typescript.
- **Libraries/Framework:** React-Native, React.js, Next.js, Node.js, Express.js, Fastapi, PrimeReact, Redux Toolkit, Redux Toolkit Query, Tailwind, Motion, Langchain, Langgraph, Prisma, Mongoose, Socket.io, Shadcn.
- **Tools:** VsCode, Bitbucket, IntelliJ, Git, GitHub, Apache xampp, Figma, Pixlr, Filmora.
- **Devops:** AWS (EC2), Azure app service, Render, Vercel, Docker.
- **Databases:** Mysql, MongoDB, Postgres.

EDUCATION

- **Bachelor of Technology in Computer Science Engineering** (2022-2025)
Hi-Tech Institute of Engineering and Technology (AKTU).
- **Diploma in Engineering** (2019-2022)
New era College of Science and Technology (BTEUP).
- **High School** (2018-2019)
Dehradun Public School (CBSE).

EXPERIENCE

- **Full Stack Developer** (July 2025 – Present)
(Code Metrics, Greater Noida) - <https://www.codemetrics.in/>
- **Full Stack Developer** (Mar 2025– July 2025)
(Webpristine Technologies, Noida) - <https://webpristine.com/>
- **Web Development Intern** (Nov 2024–Mar 2025)
(Aryson Technologies, Noida) - <https://www.arysontechnologies.com/>

PROJECTS

- **NitroHR** (Feb 2024- Present)
<https://nitrohr-frontend.azurewebsites.net/en>

Project Description -

Nitro HR is an enterprise-grade Human Resources Management System (HRMS) built for multi-tenant organizations. The platform enables companies to manage the complete employee lifecycle — from hiring to termination — along with payroll processing, leave management, performance evaluations, document handling, and subscription billing.

Key Features -

- **Multi-Tenant Architecture** — Data isolation across multiple organizations with tenant-specific database connections.
- **Employee Management** — Full employee lifecycle including profiles, history tracking, bulk CSV import, and org chart visualization.
- **Leave & Attendance** — Leave request/approval workflows, vacation management, custom leave categories, and balance tracking.
- **Payroll & Compensation** — Allowances, deductions, payroll slip generation, and PDF exports.
- **Document Management** — Contracts, work letters, employee documents with Azure Blob Storage.

Tech Stack -

Frontend - Next.js, TypeScript, Redux Toolkit, Tailwind CSS, Radix UI, React Hook Form, Zod, Recharts.

Backend - Python, FastAPI, SQLAlchemy (async), Celery, Redis.

Database - Microsoft SQL Server.

Cloud & DevOps - Azure (App Service, Blob Storage, Pipelines), Docker.

Roles & Responsibilities -

- Developed and maintained both frontend (Next.js) and backend (FastAPI) components as a Full Stack Developer.
- Built RESTful APIs with FastAPI, implementing async database operations using SQLAlchemy and SQL Server
- Designed and developed responsive UI pages and reusable components using Next.js, Tailwind CSS, and Radix UI
- Implemented Redux-based state management with 35+ slices for various modules
- Worked on multi-tenant architecture ensuring data isolation between organizations

● CASuite

(Aug 2021 – Jan 2024)

<https://ashy-ground-03f319200.4.azurestaticapps.net/>

Project Description -

CASuite is a cloud-based multi-tenant SaaS platform built for Chartered Accountant (CA) firms and accounting service providers. It helps firms manage their day-to-day operations including payroll processing, GST compliance, client management, document generation, billing & invoicing, employee monitoring, and audit tracking. Each firm gets its own isolated database and customizable workspace. The platform also includes a desktop monitoring agent for employee time and activity tracking.

Key Features -

- **Multi-Tenancy** — Each firm gets its own isolated database with separate user management, ensuring complete data privacy between tenants.
- **Payroll Management** — End-to-end payroll processing with salary structure configuration, attendance tracking, leave & loan management, TDS calculation, and auto-generated payslips.
- **GST & Compliance** — GST client management, return filing support, and a compliance calendar with 55+ pre-seeded regulatory deadlines across GST, Income Tax, MCA, PF, ESI, and more.
- **Billing & Invoicing** — Invoice generation with GST breakup (CGST/SGST/IGST), auto-numbering per financial year, payment tracking, and PDF export.
- **Document Management** — Template-based document generation with dynamic placeholders, formula support, version control, and multi-format output (PDF, Word).

Tech Stack -

Frontend - Next.js, TypeScript, Tailwind CSS, Recharts, Zod.

Backend - Python, FastAPI, SQLAlchemy, Celery, Redis.

Database - Microsoft SQL Server (multi-tenant isolated databases).

Cloud & DevOps - Microsoft Azure, Docker, Nginx, Azure Pipelines (CI/CD)

Roles & Responsibilities -

- Developed and maintained RESTful APIs using FastAPI with async SQLAlchemy for 40+ modules including payroll, GST, billing, documents, and audit management.
- Built responsive frontend pages and components using Next.js with TypeScript and Tailwind CSS for both the admin portal and client-facing portal.
- Designed and implemented multi-tenant database architecture with isolated per-tenant databases on MSSQL, managed through Alembic migrations.
- Implemented role-based access control (RBAC) with 58+ granular permissions across all modules.

● **Tech Hut Academy Admin Panel**

(Mar 2019– July 2021)

<https://www.techhutacademy.com/>

Project Description -

Tech Hut Academy Admin Panel is a centralized management system developed for Tech Hut Academy to efficiently handle and streamline multiple operational workflows, including student onboarding, teacher management, course administration, and technical support operations. The platform enables administrators to manage the entire lifecycle of users and content while providing dedicated panels for support teams to monitor and resolve issues, ensuring smooth platform functionality and enhanced user experience.

Key Features -

- **User & Onboarding Management** — Efficient handling of student and teacher onboarding processes with validation, role assignment, and lifecycle tracking.
- **Course & Content Management** — Create, update, and manage courses, modules, and learning resources dynamically through a centralized dashboard.
- **Teacher Management System** — Manage teacher profiles, course allocations, and performance tracking.
- **Technical Support Panel** — Dedicated interface for support teams to track, manage, and resolve user issues and queries in real time.
- **Role-Based Access Control (RBAC)** — Secure access management with different permission levels for admins, teachers, and support staff.
- **Dashboard & Analytics** — Provides insights into user activity, course engagement, and platform performance through dynamic dashboards.

Tech Stack -

Frontend - React.js, Redux Toolkit, Redux Toolkit Query, Tailwind CSS, ShadCN.

Backend - Node.js, Express.js.

Roles & Responsibilities -

- Developed scalable RESTful APIs using Node.js and Express.js to manage users, courses, and platform operations.
- Built a responsive and intuitive admin interface using Next.js, Tailwind CSS, and ShadCN components.
- Implemented efficient state management and API handling using Redux Toolkit and Redux Toolkit Query.
- Designed role-based authentication and authorization mechanisms for secure access control.
- Developed modules for onboarding workflows, course management, and technical support handling.
